SUMMARY

I'm a generalist game programmer who is driven by working in a team, learning from others, and delivering games that leave an impression on my players. I have experience making gameplay systems for Unity and Unreal, using C# and C++ and visual scripting.

EXPERIENCE

Officine Pixel, Programming intern

04/2024 – 05/2024 Forlì, Italy

- Interned at Officine Pixel, working on a standalone game project, as a solo developer I took the responsibility for planning, working hours, and delivering the game.
- I lived in an apartment in Forlì with 9 other students, learning how to live in a different country with others, and taking responsibility over a shared living household.

Skillster, Programming intern

02/2024 – 03/2024 Umeå, Sweden

- Interned at Skillster, working on their **vehicle simulator**, making lessons about vehicle handling, and different challenges while operating the vehicle.
- Worked in **Unity**, programmed in C#, and used git for version control.
- Worked on tasks that were given to me, and were able to make design choices from the task specifications, iterating the design with Skillset's testers.
- Learned a lot about working in Unity, working with a pre-existing code base, and working iteratively with a team.

Stöcke Svets, Web developer

11/2021 – 03/2022 Umeå, Sweden

- Solo web developer for the Stöcke Svets website.
- Worked with the employer to make a design.
- Using WordPress, and Telia for hosting.

FutureGames projects

These projects were done during my FutureGames education, for each project there is a team of 15 to 18 people. The disciplines involved are programmers, designers, artists, QA, UX design, animators and producers.

“Loop Reset” game project 4, Game Programmer

5/2025 – 6/2025 Umeå, Sverige

- “Loop Reset” is a twin stick shooter with arcade feeling, procedural level generation, and upgradable weapons.
- Made in **Unreal 5**, where I worked mainly on procedural level generation, worked closely with the level designer so my tool worked with their level pieces. I also worked on performance handling, game saving and game setup sequence.
- Having problems with technical debt in the project, I learned the importance of planning code bases that will be used and how systems would need to scale. I learned the importance of having someone in the team who can set deadlines so the project gets done in time.

“In Bloom” game project 3, Game Programmer

5/2025 – 6/2025 Umeå, Sverige

- “In Bloom” is a first person horror survival game in a post-apocalyptic world where nature has taken over.
- Made in **Unreal 5**, where I worked on the enemy AI, enemy combat, and UI programming.
- From this project, I learned how to work in Unreal with a team, how to use Unreal's AI behavior system, the importance of taking ownership of features, and time management when having multiple tasks with a close deadline.

“By Tooth & Tail” game project 2, Game Programmer

2/2025 – 3/2025 Umeå, Sverige

- “By Tooth & Tail” is a 3D turn-based stealth game that has Pokémon Mystery Dungeon movement and Metal Gear Solid-inspired stealth.
- Made in **Unity**, where I worked on systems such as the turn-based system, interactable objects, and UI programming.
- This project taught me how important communication is, how to act when things go wrong in a project and group, and how to handle unprofessionalism in a team.

“Raccoon Rascal” game project 1, Game Programmer

10/2024 – 11/2024 Umeå, Sverige

- “Raccoon Rascal” is a 3D chase and run game where you are a raccoon that steals trinkets while you try not to get caught.
- Made in **Unity**, where I worked on systems such as pick-ups, power-ups, UI, and store systems.

- Learned the development process of making games while working in a team, programming with others, and the importance of delivering on the responsibilities I have.

EDUCATION

FutureGames, Game programmer

09/2024 – present Umeå, Sweden

- Studied game programming, C#, C++, Unity, and Unreal.
- Under my Studies, there are 4 game projects with 15+ people per team, ranging between 3-7 weeks, and a 6-month LIA.
- Under the game projects, I have learned the development process for making games in a team and how important communication is for productivity and team culture.
- Making systems that are easy to use and heavily customizable is important when it is mostly others in a team who are using them.

Nti Gymnasiet, High school engineer

09/2023 – 06/2024 Umeå, Sweden

- Studied web development, databases related to web development, and general programming.
- During the education I had 10 weeks of workplace-based learning: 6 weeks at Skillster in Umeå, Sweden, and 4 weeks at Officine Pixel in Forlì, Italy.

Nti Gymnasiet, Computer and information science

08/2020 – 06/2023 Umeå, Sweden

- Studied computer and information science, focused on web development and programming.
- Learned general programming, how to think about different problems when programming, and how to solve them.
- Learned how to make a website from the design to a finished website.
